## Taxes Done, Now What?

---

---

Once your taxes are prepared and filed, where do you keep your financial records? Often they are stored on that hard drive of your computer, along with lots of other critical data, including patient and personnel records, Medisoft data files, and more.

When it comes to data protection, small business owners typically are not interested in the latest revisions of a specific technology. Their concerns are more of a practical nature: stay in business, enjoy convenience and have peace of mind.

The ideal plan would include protection of computer systems from attack by viruses, physical protection of the hardware and stored data and backup to a remote location. Also important for small business owners is that the plan be as simple and automated as possible, freeing them to run the business, not become a technology guru.

"The first question is typically how much is it going to cost to get started and to protect my data on a monthly basis?" notes data backup market researcher Mike Garland. "It's like insurance, you don't want to spend the money until you need the service. Then you are glad you have it."

How much time will it take?  
For small business owners, data backup

should be automated as often as possible. This saves time and backs up your data consistently. Some solutions offer a confirming e-mail to the business owner that assures them the data is backed up safely. This offers continued peace a mind.

Will a copy of the data be safe in the event of theft, fire or natural disaster? Data that is stored on disks and drives is useless if those storage items are subject to the same disaster as the computer. The safest solutions include backup to a remote commercial data centers.

Will the data be encrypted to limit access on a stored tape or via Internet transmission? Typical copying of files to CD or backup to tape can increase the risk of data compromise if the data is not encrypted. Any Internet data transmission is vulnerable if it is not encrypted.

Quadex Healthcare Solutions now offers online data backup for our customers.
